

Tuo Hou//50142108

Part1:

	test_classes	
PredictionSVM	comp	talk
comp	1165	576
talk	790	725

sensitivity = 0.5959079
specificity = 0.5572636

Part2:

	test1.class	
PredictionSVM	comp	talk
1	721	316
2	255	337

sensitivity = 0.73872950819
specificity = 0.51607963246

	test2.class	
PredictionSVM	comp	talk
1	738	326
2	241	324

sensitivity = 0.75383043922
specificity = 0.49846153846

	test3.class	
PredictionSVM	comp	talk
1	732	329
2	244	324

sensitivity = 0.75
specificity = 0.49617151608

	test4.class	
PredictionSVM	comp	talk
1	734	292
2	255	348

sensitivity = 0.74216380182
specificity = 0.54375

	test5.class	
PredictionSVM	comp	talk
1	714	288
2	257	369

sensitivity = 0.73532440782
specificity = 0.56164383561

I suspect the reason of the difference is caused when we assigned the class. in part 1 class are assigned in an order, where in part2 classes are assigned in random
